

Web SCADA on Windows Mobile mobile phones with AUTOMGEN⁸

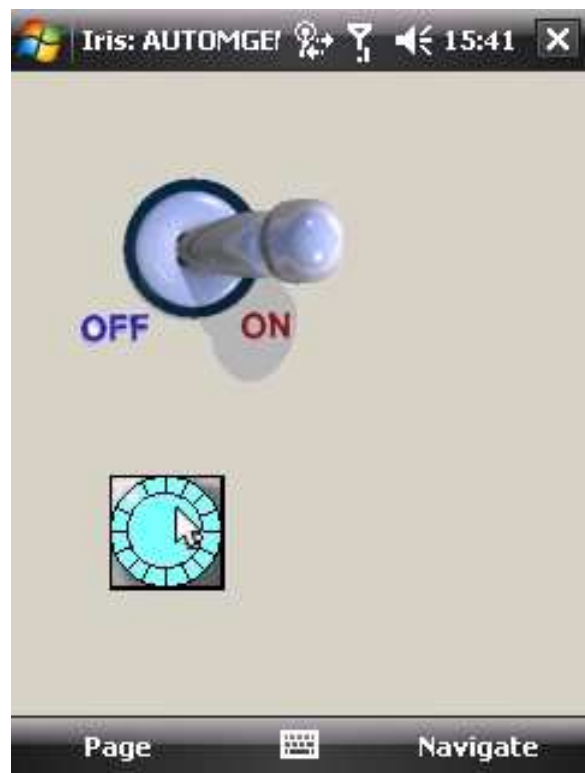

Main concept

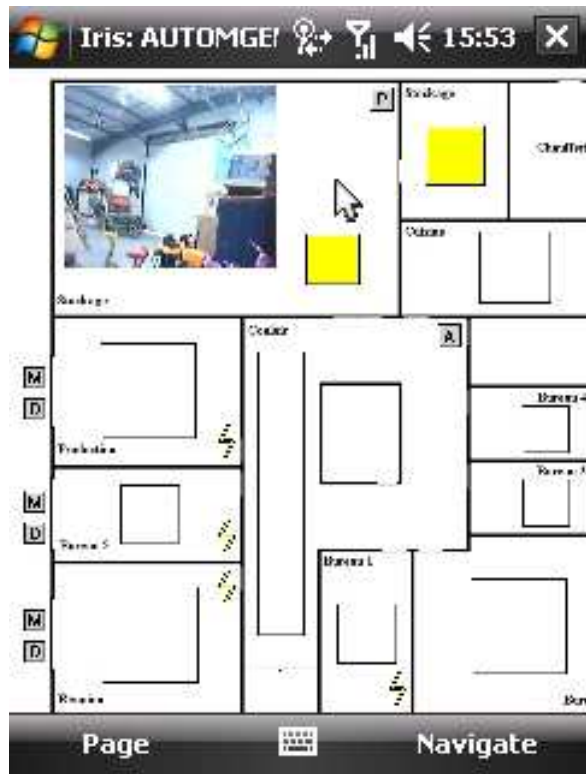

Web browsers performances on mobile phones evolve every day. Torch Mobile company (www.torchmobile.com) build a web browser called IRIS Browser with great features. This web browser allows a connection with AUTOMGEN⁸ web server and the use of WEB SCADA applications with a good compatibility level close to the PC web browsers.

Limitation

This web browser cannot use java objects, so AUTOMGEN SCADA applications which use complex objects (valana AUTOMGEN object by example) must use connection mode to the auto.html page.
