

Universal Gateway

Target

### Definition file

A target is composed by a definition file and a dll.

The definition file must be present in the “drivers” sub directory of the Universal Gateway directory.

The definition file has a “.ug” extension and is a xml file format.

The general format is:

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<gateway id="<short gateway id>" name_e="<Short English name>" name_f="<short French name>"  
dll="<dll file name>" desc_e="<long English description>" desc_f="<long F description>">
```

```
<optional parameters>
```

```
</gateway>
```

Please look at existing definition files for examples.

### Dll file

The dll file must be present in the Universal Gateway directory.

Use the Visual Studio project file example as skeleton.
